summary

- Seeking an exciting Senior Quality Engineer (*Manual/Automation*) position with a top-notch technology driven company that will allow me to learn new skills, enhance and implement my existing skills for being a zealous engineer. I am a quick learner and eager to contribute with my creativity and hard work towards the goals & in turn the success of the company.
- Having *9 + Yrs* of testing-specific experience in Writing Automated Test cases . Performing Functional Testing, Smoke Testing, Integration Testing, Regression Testing and System Testing.
- Has previously worked on traditional V-Model oriented projects. Worked on *AGILE* projects (Starting Aug-2013 to Present) Involved in various phases of Software Test Life Cycle.
- Extensive experience in preparing Test Scenarios and Documentation of Manual & Automation Test Cases.
- Worked with IBM rational tools like Clear Quest, Clear Case. Worked for *3+ yrs* with *IBM Rational Functional Tester* for Automation testing using *Hybrid* framework & *JAVA*.
- Has around *6+ yrs*. of hands-on *Automation* testing experience.
- Worked *1 yr* on *WebServices RESTful* using *SOAPUI* and *Groovy* scripting.
- Worked on WebServices Testing using *PERL* script[Has *2 Yrs* experience in WebServices Testing].
- Good experience in Defect Tracking System using IBM's Clear Quest,HP's Quality Center 8.2,Microsoft's Team Foundation Server & Share Point.
- Excellent communication and interpersonal skills, Consistently being recognized by management and peers for producing high quality deliverables. Ability to work independently as well as in a team environment.
- Worked on *Selenium Webdriver*, Maven, TestNG, Git, GitHub for 1+ years.
- Worked on *CodedUI Automation* using Visual studio and *C#* for 1 year.
- Worked on *Database testing* for 1 year on Leveraged Solutions project.
- Has *B-1 VISA* and have traveled to U.S.A twice - 2012 & 2015
- Able to *quickly learn & implement* any new tool, technology and Progrmming/Scripting language

skills

- Testing Tools SOAPUI
- IBM Rational Functional Tester 8.1
- Operating System Windows 7, Windows XP, Linux, Unix
- Languages C, Core Java, C#
- Coded UI Automation - VSTS 2010
- Clear Quest
- Team FoundationServer
- Mercury Quality Centre 8.2
- Eclipse IDE

- Scripting Perl, Groovy script, JavaScript
- R.D.B.M.S MS SQLServer 2008,Oracle 10i
- Rational Requisite Pro
- Excellent problem-solving abilities

work history

Senior Quality Engineer

Fidelity National Financial India   Bengaluru, Karnataka

- *Fidelity National Financial India* - Oct 2010 to Jun 2017
- *Accenture Services Pvt.Ltd* , worked as Software Engineer in Bangalore from Aug 2007 - Sep 2010.

Stewart Jackets   Jul 2016 - Jun 2017

Fidelity National Finance India   Bengaluru, Karnataka

Project #1

Title: Stewart Jackets

Client: Fidelity National Financial

Role:Sr. Quality Engineer

Team strength: 2

Methodology: Agile

Tools : Visual Studio 2010 Ultimate, TFS

Description:

Stewart Jackets is an integration of Stewart Title underwriting services with the SoftPro-360 windows product used by Fidelity National Financial to provide Title and Closing services. SoftPro360 makes RPC calls to Stewart to fetch various data as required during the issuance of a Policy Jacket.
Policy Jacket has different states - Completed, Rejected, Cancelled, InProgress, Ready.

Roles & Responsibilities:

- Attend Sprint planning meeting
- Understand requirements, flow and functionality of the application.
- Add UIMaps for different screens and wrote Business logic for the screens
- Preparing test scripts using CodedUI C# and test data.
- Execution of test scripts in different test environments - Windows 7 and 8
- Involved in code reviews to analyse the test scripts.
- Interaction with client team to resolve the functional, data and testing queries.
- Smoke, Functional, Integration, Regression and System testing.
- Identify the possible positive and negative cases for the Test scenario created and making sure the Test Script is concise, understandable and executable.
- Executed Test scripts and reported defects in terms of Major, Minor & Critical. Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions)
- Tracking bugs and logging them in Team Foundation Server.
- Establish onshore calls on daily basis [Daily Standups] to improve the quality of the project in various aspects.

Rate Services

Fidelity National Financial

Project # 2

Title: Rate Services Client:

Fidelity National Financial

Role: Sr.Quality Engineer

Team Strength: 4 [WebServices Testing]

Methodology: V- Model

Tools used: PERL,Visual Studio 2013, MTM, TFS (Team Foundation Server)

Description:

This project allow lenders and 3rd parties to connect to the NRC service, so they can integrate their current systems, without the need for using a standalone Rate Calculator application to complete a policy quote. To accomplish this, the prototype was implemented using Windows Communication Foundation (WCF) REST API, which transmits JSON or XML messages.

Roles & Responsibilities:
- Understand requirements, flow and functionality of the application.
- Preparing Services Automation test scripts and test data for REST protocol Execution of test cases in QA environment.
- Wrote reusable PERL script for data driven framework.
- Interaction with client team to resolve the testing queries.
- Executed Test Cases and reported defects in terms of Major, Minor & Critical. Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions)
- Tracking bugs and logging them in Microsoft TFS [Team Foundation Server].

Testing - Planning and Execution:
- Prepare test environment with the help of IT Support team.
- Manage Defect cycle using bug-tracking tool.

Process Improvements:
- Wrote reusable functions in PERL as and when the situation demanded.

Jacket Trax

Fidelity National Finance India   Bengaluru, Karnataka

Project # 3

Title: Jacket Trax Client:

Fidelity National Financial

Role: Sr.Quality Engineer

Team Strength: 2 [WebServices Testing]

Methodology: Agile

Tools used: SOAPUI, TFS (Team Foundation Server)

Description:

The JacketTrax Web API will provide Fidelity National Title Group agents the ability to issue jackets from their T & E software. It will allow a user to send order information directly to agentTRAX, eliminating the need to retype this information. Calls to the service build upon each other. Output from one call, will often be used as input to a subsequent service call.

The service supports REST (Representational State Transfer) over SSL for communications between client and server. Both XML and JSON formats are currently supported. Future versions of the service are likely to only support the JSON format.

Roles & Responsibilities:

- Understand requirements, flow and functionality of the application.
- Preparing Services Automation test scripts and test data for REST protocol Execution of test cases in QA environment.
- Wrote reusable Groovy script for data driven framework.
- Wrote Groovy script for HTML report generation.
- Attending Sprint Planning / Poker Planning sessions at the beginning of every sprint.
- Attending Daily Stand Up meetings.
- Attending Sprint Retrospective meetings at the end of every sprint.
- Interaction with client team to resolve the testing queries.
- Executed Test Cases and reported defects in terms of Major, Minor & Critical. Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions)
- Tracking bugs and logging them in Microsoft TFS [Team Foundation Server].

Testing - Planning and Execution:

- Prepare test environment with the help of IT Support team. Manage Defect cycle using bug-tracking tool.

Process Improvements:

- Wrote reusable functions in Groovy as and when the situation demanded.

NextAce [Selenium]   Jan 2015 - Nov 2015
Fidelity National Financial   BANGALORE, KARNATAKA
Project #4
Title: NextAce
Fidelity National Financial
Role:Sr.Quality Engineer
Team Strength: 2 [Automation Testing] - Migration from Rational Tools to SELENIUM
Methodology: V - Model
Tools used: Selenium-WebDriver, TestNG, Maven, Git, GitHub

Description:

NextAce is a premium Title Order search and processing App . This portal is designed to help customers gain streamlined access to Order information across Fidelity's nationwide network of local resources.

Roles & Responsibilities:

- Understand requirements, flow and functionality of the application.
- Preparing Automation test scripts and test data.
- Learning web objects using Selenium & developer tool DOM
- Execution of test cases in QA environment.
- Updating Web objects and Test data as per changes in the application. Interaction with client team to resolve the testing queries.
- Executed Test Cases and reported defects in terms of Major, Minor & Critical. Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions) ·
- Tracking bugs and logging them in Microsoft TFS [Team Foundation Server].

Testing - Planning and Execution:

- Prepare test environment with the help of IT Support team. Manage Defect cycle using bug-tracking tool.

Process Improvements:

- Wrote reusable functions in Java as and when the situation demanded.

AgentTrax [Selenium]   Dec 2015 - Jun 2016

Fidelity National Financial   Bangalore

Project # 5

Title: agentTRAX (Title Insurance Agency Solutions)

Client: Fidelity National Financial

Role: Senior Test Engineer

Team Strength:4

Methodology: V-Model

Tools used: Selenium-WebDriver, Maven, TestNG, Git, GitHub,MS SQLServer 2008

Description: Migration from Rational tools to SELENIUM

Roles & Responsibilities :

- Understand requirements, flow and functionality of the application.
- Preparing test cases and test data. Execution of test cases in Test & Production environments.
- Involved in peer reviews to analyse the test cases. Interaction with client team to resolve the functional, data and testing queries.
- Smoke, Functional, Integration, Regression and System testing.

- Identify the possible positive and negative cases for the Test scenario created and making sure the Test Script is concise, understandable and executable.
- Executed Test Cases and reported defects in terms of Major, Minor & Critical. Making sure the Test scripts are executed based on the Cycle plan without any slippage.
- Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions)
- Tracking bugs and logging them in Clear Quest.

Testing - Planning and Execution:
- Prepare detailed test suites for Integration, System, Regression testing and execute the test cases.
- Manage Defect cycle using bug-tracking tool.
- Updating the testing progress to the project group and preparation of test summary reports.

Leveraged Solutions – [ETL - Database Testing]   Oct 2011 - Oct 2012
Fidelity National Financial India   Bengaluru, Karnataka
Project #6
Title: Leveraged Solutions – IBM Cognos Reporting (DatawareHouse Project) Client: Fidelity National Financial
Role: Test Engineer
Team Strength: 2
Methodology: V-Model
Tools used: MS SQLServer 2008, RFT, Clear Quest, Share Point

Description:
This project is a migration from Document Direct to IBM Cognos Reporting. Document Direct is a program that allows selected users like managers, bookkeepers, and other decision makers to simultaneously view financial statements and documents that pertain to each user's operation. Each user is assigned an exclusive login ID and password and can view only financial statements for which the user is responsible. During each month-end financial close, preliminary income statement trends and general ledger detail reports are placed on Document Direct beginning with the third business day of every month. These preliminary reports are placed on Document Direct one time each day for every day of the close. Once the preliminary reports are complete, managers have 24 hours to review, correct, and adjust these reports. After the 24-hour review period has ended, operations are final. At that point, the final income statement trends and general ledger reports are placed on Document Direct. In the days following, additional final reports such as balance sheet trends, budget comparisons, and departmental income statements are placed on Document Direct. Users are informed of what reports are available as well as the status of the 24-hour review period by a screen visible when they first select Document Direct from the FNF homepage menu.

Roles & Responsibilities:
- Understand requirements, flow and functionality of the application.
- Preparing test cases and test data.
- Execution of test cases in Test & Production environments.

- Involved in peer reviews to analyse the test cases.
- Interaction with client team to resolve the functional, data and testing queries.
- Smoke, Functional, Integration, Regression and System testing.
- Involved in functional study of application Participating in Technical Meetings and Workgroup Meetings to understand the business.
- Identify the possible positive and negative cases for the Test scenario created and making sure the Test Script is concise, understandable and executable. Involved in developing a full suite of test cases to test the product's stability. Executed Test Cases and reported defects in terms of Major, Minor & Critical. Making sure the Test scripts are executed based on the Cycle plan without any slippage.
- Reproducing all defects found and provide detail documentation (e.g. screen prints, step-by-step reproduction instructions)
- Tracking bugs and logging them in Clear Quest.

Testing - Planning and Execution:
- Prepare detailed test suites for Integration, System, Regression testing and execute the test cases.
- Manage Defect cycle using bug-tracking tool.
- Updating the testing progress to the project group and preparation of test summary reports.

Process Improvements:
- Automated the Regression Suite using IBM's Rational Functional Tester.
- Wrote P.E.R.L scripts for comparison of two reports.
- Wrote SQL queries to compare HTML report data with the Database.

education
